

SAMPLE ABSTRACT

Title: AI-Driven Sustainable Technology Solutions for Smart Cities

Authors: Dr. Jane Smith, Prof. John Doe, Research Institute

Abstract:

This research presents a comprehensive framework for implementing artificial intelligence solutions in urban sustainability initiatives. Our methodology combines machine learning algorithms with IoT sensor networks to optimize energy consumption in smart city infrastructure. The proposed system demonstrates a 30% reduction in energy waste and 25% improvement in resource allocation efficiency across pilot urban environments.

Keywords: Artificial Intelligence, Smart Cities, Sustainability, Machine Learning, IoT, Energy Optimization

Conference Track: Technology Innovation

Presentation Type: Oral Presentation
